MY RECOMMENDATION

Your fund has experienced market fluctuations while your SIP investments have continued.

Market movements can impact your fund's value in the short term, even when your SIP is on track.

Your SIP is accumulating units

When NAV is lower, the same SIP amount purchases more units.

Month	SIP amount	NAV (₹)	Units
Jan	₹1,000	100.00	10.00
Feb	₹1,000	90.00	11.11
Mar	₹1,000	85.00	11.76

Total units accumulated **32.87**

If NAV stayed at ₹100

30.00 units

▲ ≈ 9.6% more units
(32.87 vs 30.00)

ⓘ More units do not guarantee positive returns.

What this means

Your fund has faced short-term market fluctuations, which has impacted its value. At the same time, your SIP investments have continued to buy more units at lower NAVs.

Why is my portfolio down?

3

SBI Large & Midcap Fund

Direct Plan · Growth · Active SIP

Your fund has seen short-term market fluctuations.

Like many equity funds, its value has been impacted by recent market movements, while your SIP investments have continued as planned.

Your SIP is accumulating units

When the fund price is lower, your regular SIP amount purchases more units.

Month	SIP amount	Fund price	Units purchased
Jan	₹2,000	₹100.00	20.00
Feb	₹2,000	₹90.00	22.22
Mar	₹2,000	₹85.00	23.53

Total units accumulated

65.75

If the fund price stayed at ₹100

60.00 units

▲ ≈ 9.6% more units

ⓘ More units do not guarantee positive returns.

What this means

Your portfolio value is currently lower due to market movements, while your SIP has continued to purchase more units at lower prices. Over the long term, these additional units can help in wealth creation.

9:41

← Market Impact 4

Broader market is down 2.6% this month

How it impacted your portfolio

Broader market (Nifty 50)	-2.6%
Your fund's sector (IT)	-4.1%
Fund-specific factors	-1.6%
Total portfolio change	**-8.3%**

Most of the drop (≅ 2.6%) is due to overall market movement, while the rest is from your fund's sector and stock performance.
